

# Case Study

## CURVED AND ELEGANCE LINEAR SLIDING DOORS AND ELIMINATE DOUBLE WING (TALL) PASS DOORS, GREENWICH MARKETING HUB, LONDON

Knight Dragon had the vision to create a building with unique doors with "a never made flush appearance".

Bauporte Doors has been asked to develop doors which should be flush with the facade, once they are closed. For this building Bauporte developed straight single manual, straight double Inground automatic and TALL Curved manual swing doors with special made heavy floor closers.

The Eliminate swing doors are made out of Double Glazed Units, with the special design that the profile which is normally going around the glass, has now been put into the spacer of the glass. Due to this brand new design we still can state that our basic construction is made out of a Stainless Steel frame. Due to this way of construction of the door we can go up to a height of 5000mm.

The doors we can make with this structure are single and double swing doors and straight and curved sliding doors in normal and TALL design.

## Summary

Project	Greenwich Marketing Hub
Client	Knight Dragon
Location	Greenwich, London
Architect	Mark Barfield
Contractor	Wates Construction Ltd.
Entrance	1 CFV Curved sliding door with in ground operator BSDR220 AI, 1 Elegance Linear sliding door with in ground operator BSD218 AI, 3 Eliminate Double wing TALL pass doors with in ground operators BDD2 AI, 6 Eliminate double wing pass doors with special heavy duty floor closers BDD2 M
